1. Overview

Parameter	Details
Project / Feature Name	Ticket Raising
Test Date	18/09/2026
QA Lead / Tester	K.Kavya
Environment	Pre production

2. Result Summary

Total Executed	Passed	Failed	Blocked	Pass Rate (%)
[70]	**[64]**	**[2]**	**[4]**	**[91%]**

Final Verdict: **[PASSED]**

3. Test Scope & Coverage

- [ ] Login Dashboard – Forgot Password and Remember Me
- [ ] Customer Portal – Global Search and Navigation Redirection
- [ ] Customer Portal – All System Tickets option in My Tickets Page
- [ ] Customer Portal – My Tickets Queue Option in Raise a Ticket Page
- [ ] Admin Portal – Global Search and Navigation Redirection

4. Defects & Failures

Bug ID / Link	Description	Severity
BUG-101	The "Forgot Password" option available on the Login Dashboard is not working. Selecting the option does not open the password recovery page and no reset form, verification step, or confirmation message is displayed to the user. The user therefore has no way to recover access to the account once the password is forgotten. For example, after creating a new account and reaching the login page, clicking on "Forgot Password" keeps the user on the same login screen without navigating to the password reset page or showing any message, so a user who has forgotten the password cannot proceed further.	Critical
BUG-102	The "Remember me" option on the Login Dashboard does not retain the user login details for the next login attempt. Even after the option is selected during a successful login, the saved credentials are not presented when the user returns to the login page, and the option behaves the same as a normal login. For example, when a user selects "Remember me", logs in successfully, logs out, and then opens the login page again, the email/username field is empty and the credentials have to be entered manually every time, which shows that the selected option has no effect.	Medium
BUG-103	The global search in the Customer Portal does not redirect the user to the correct page for the searched item. Selecting a search result always navigates to the "My Tickets" page instead of the page that matches the searched keyword. For example, when the user searches for "Raise a Ticket" and clicks the result, the "My Tickets" page opens instead of the "Raise a Ticket" page. The user then has to reach the page manually from the menu to submit a new ticket.	Medium
BUG-104	The "All System Tickets" filter/option available on the "My Tickets" page of the Customer Portal is not opening or loading. Selecting the option does not display any ticket list, empty-state message, or error message, and the page remains on the previously displayed view. For example, a user who has logged in to the Customer Portal and opened the "My Tickets" page and then selects "All System Tickets" to review the complete ticket list sees no change on the screen and cannot view any records under that option.	High
BUG-105	The "My Tickets Queue" option available on the "Raise a Ticket" page of the Customer Portal is not opening. The option can be selected but the corresponding queue view is not displayed and no records or messages are shown to the user. For example, while raising a new ticket, a user who selects "My Tickets Queue" to check previously raised tickets before submitting a	Medium

	new request is not taken to the queue view and cannot verify whether a similar ticket already exists.	
BUG-106	The global search in the Admin Portal always redirects to the "All Tickets Queue" page irrespective of the keyword entered. The search result does not correspond to the searched module, page, or ticket, which makes the search feature unusable for navigation in the Admin Portal. For example, when the admin user searches for a specific module or a particular ticket reference in the Admin Portal search bar, the application opens the "Tickets Queue" page every time instead of the searched page or the matching ticket details.	Medium
BUG-107	The search functionality is not working as expected across all Portals. Searched keywords do not return matching results, and no proper "no results found" message is displayed when a match is unavailable. For example, when searching for a customer system user in the Manager Portal, the search always redirects to or displays the Ticket Queue page instead of showing the relevant matching result.	High

5. Blockers & Notes

[List any issues that prevented testing, or critical context for the engineering team here. Leave blank if none.]
